SUPPLY-CHAIN SMART CONTRACT

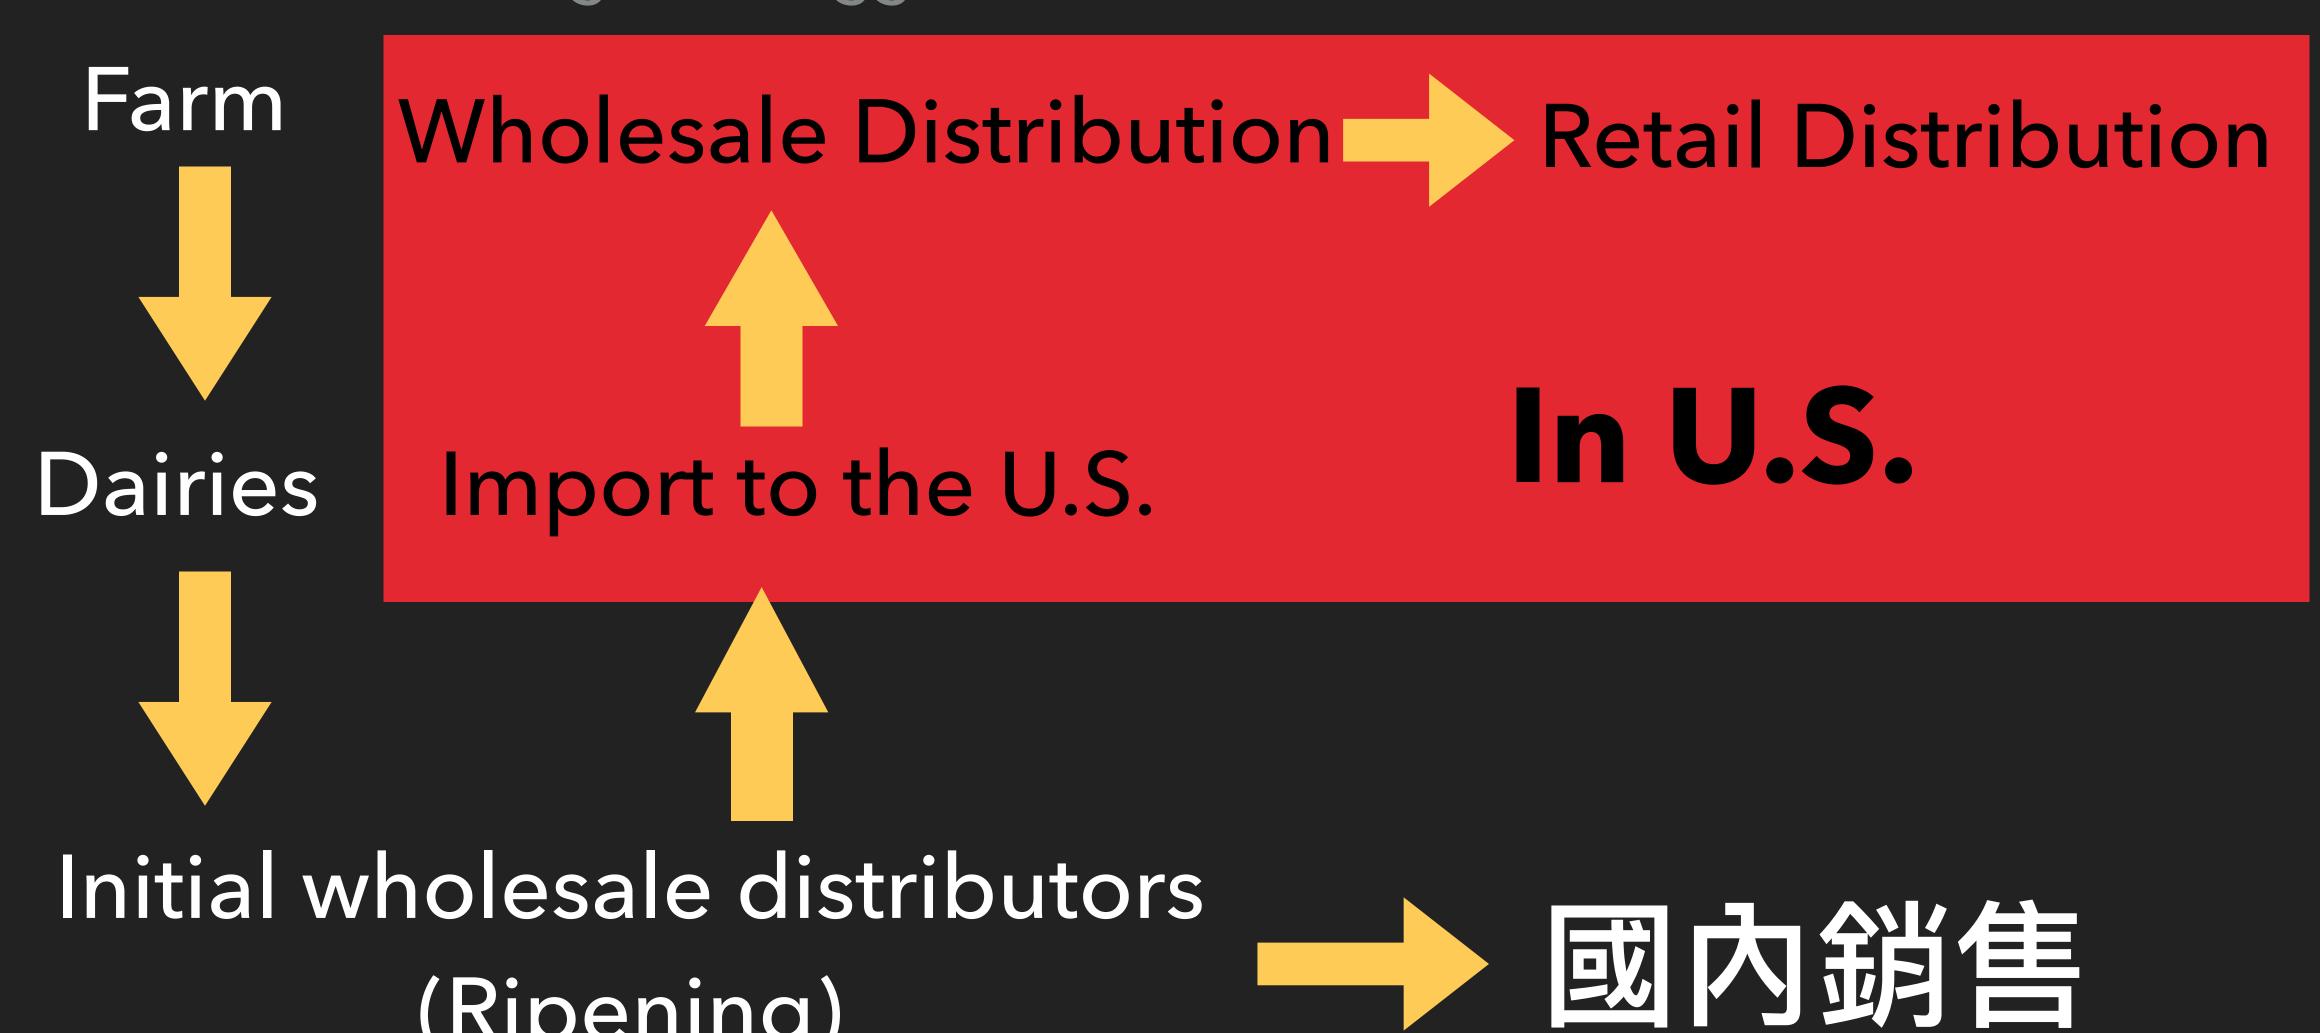

資工系大三汪昱維

大約

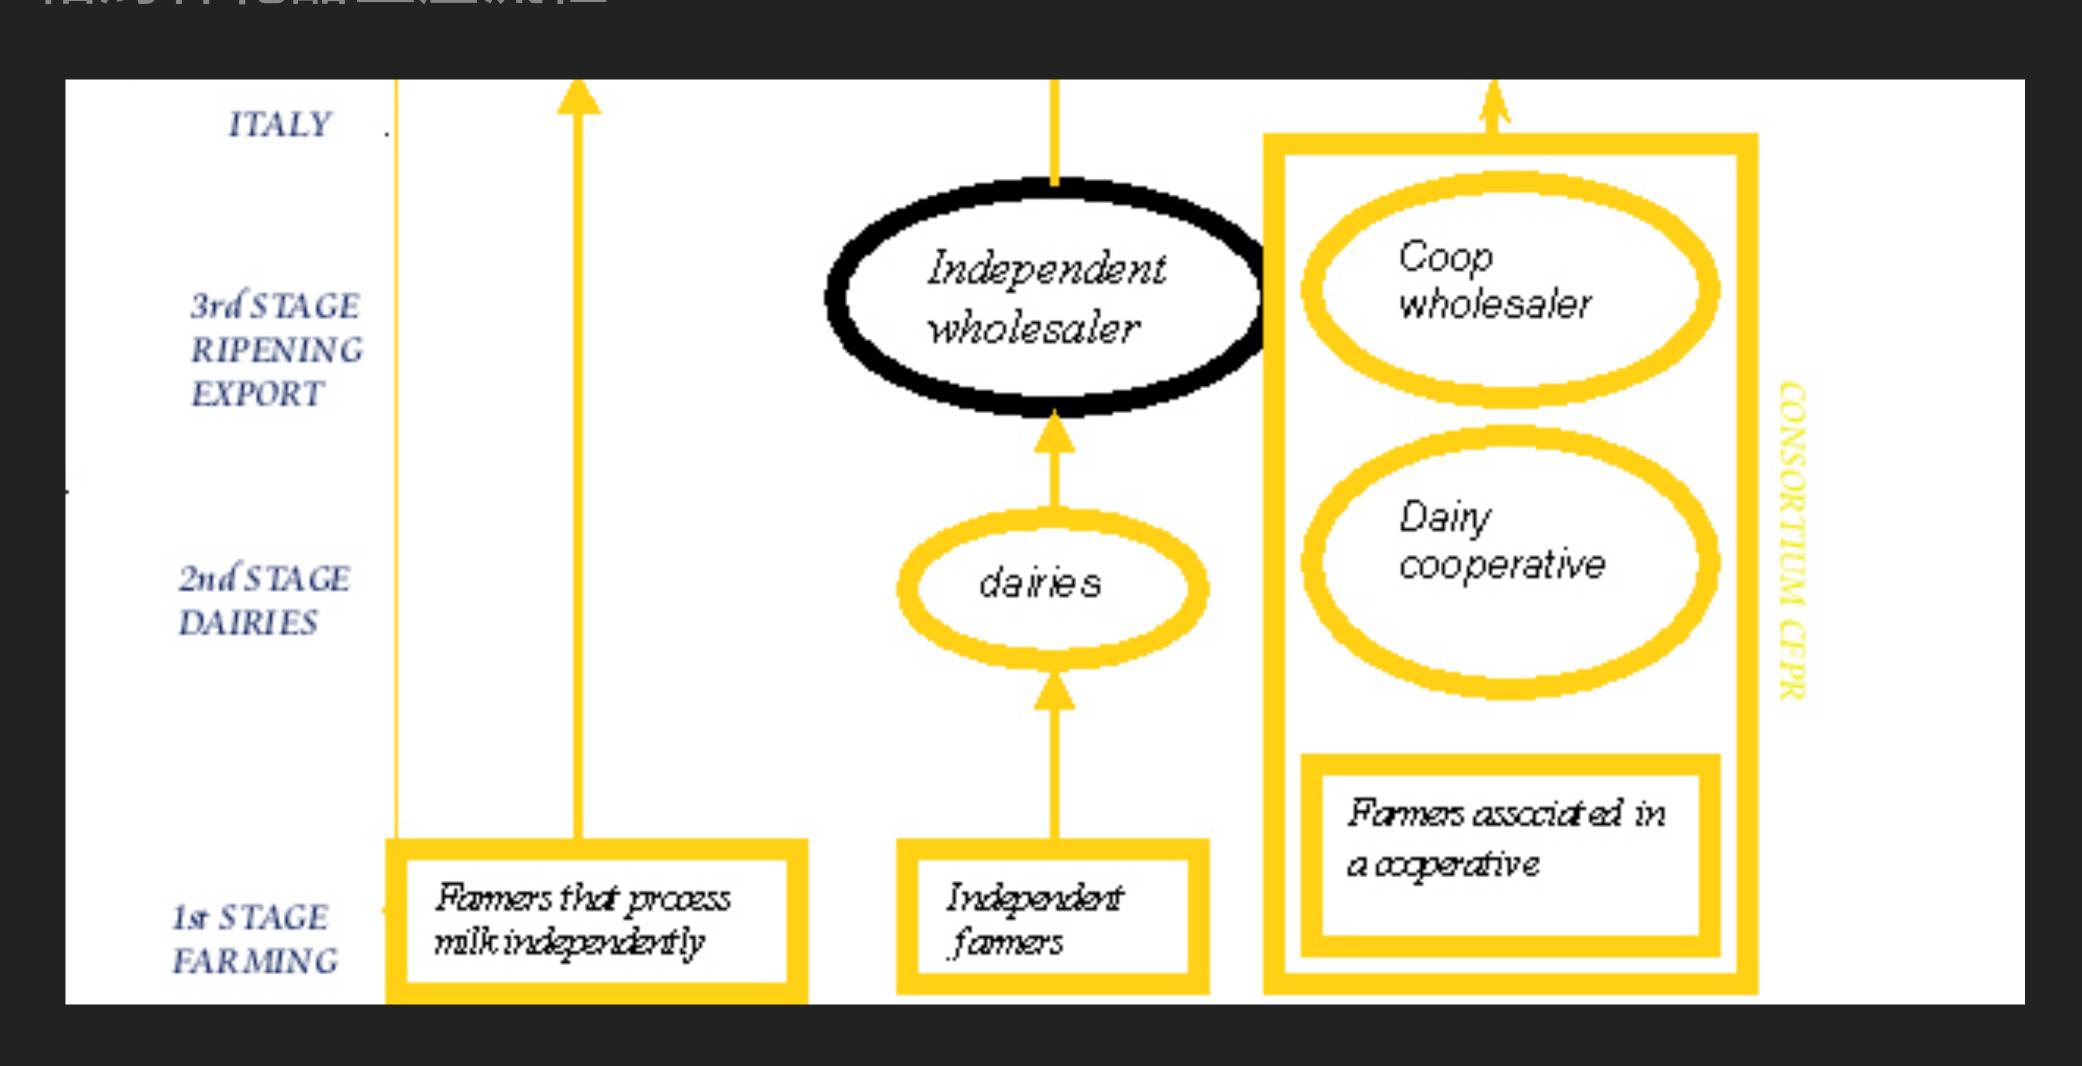

- 問題簡介
- 程式架構
- 程式DEMO

▶ 帕馬森乾酪 (Parmigiano-Reggiano)生產流程:

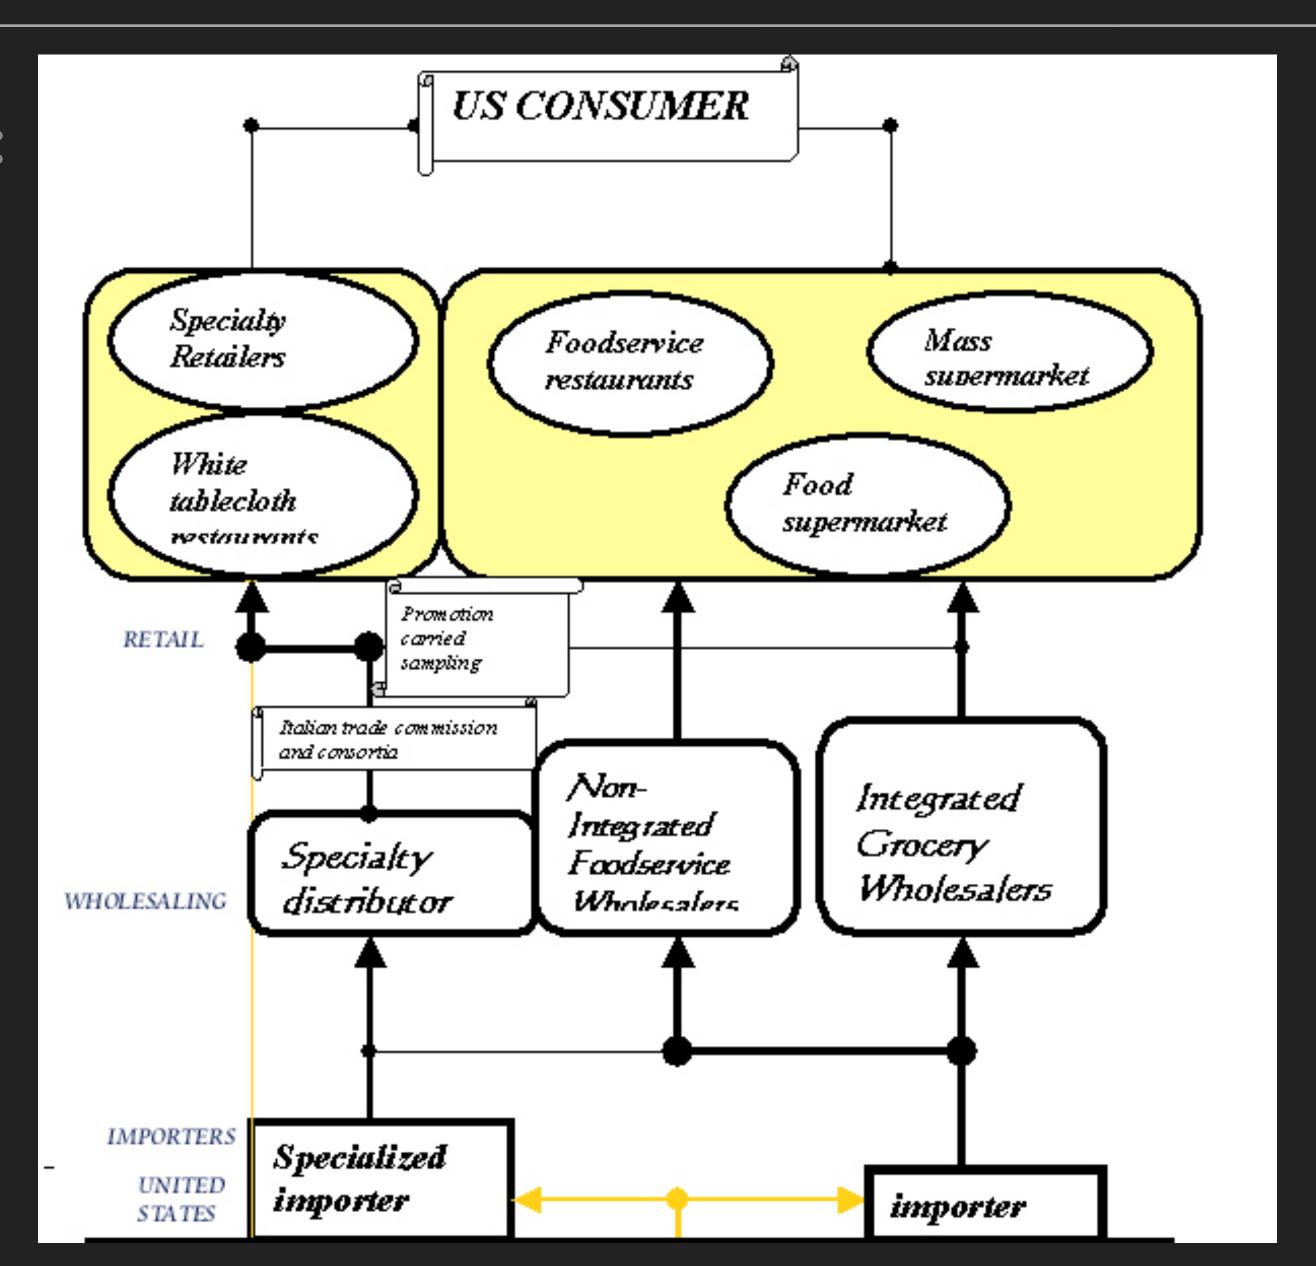

(Ripening)

▶ 帕馬森乾酪生產流程:

▶ 帕馬森乾酪生產流程:

- ●問題彙整
 - ▶ 應映市價調整供應商
 - ->Lottery(pickWinner)
 - ▶ 確保貨品品質符合規定 (只跟符合廠商交易)
 - ->事先跟特定廠商交換私鑰,並以此來在smart contract上交易
 - 不直接保存私鑰在合約上
 - ->紀錄待更新的key(每筆交易都要更新)
 - ▶ Input Output 都是公開透明
 - ->不直接輸入password,而是用key加密(XOR)後的樣子
 - ▶ 不綁定特定Address(同一客戶可用不同Address)
 - ->用Address更新key,若是新Address不屬於該客戶,則該客戶無法再進行交易 (會發現)

(二)程式架構

Client:

- ▶ password (bytes32) : Nonce->用address更新
- ▶ refreshTime (uint) :更新mask(私鑰)的次數
- ▶ Account (address) :客戶最初綁定的位址
- ▶ MaskAddress (address) :Mask(私鑰)的合約位址
- ▶ lock (bool) :狀態紀錄

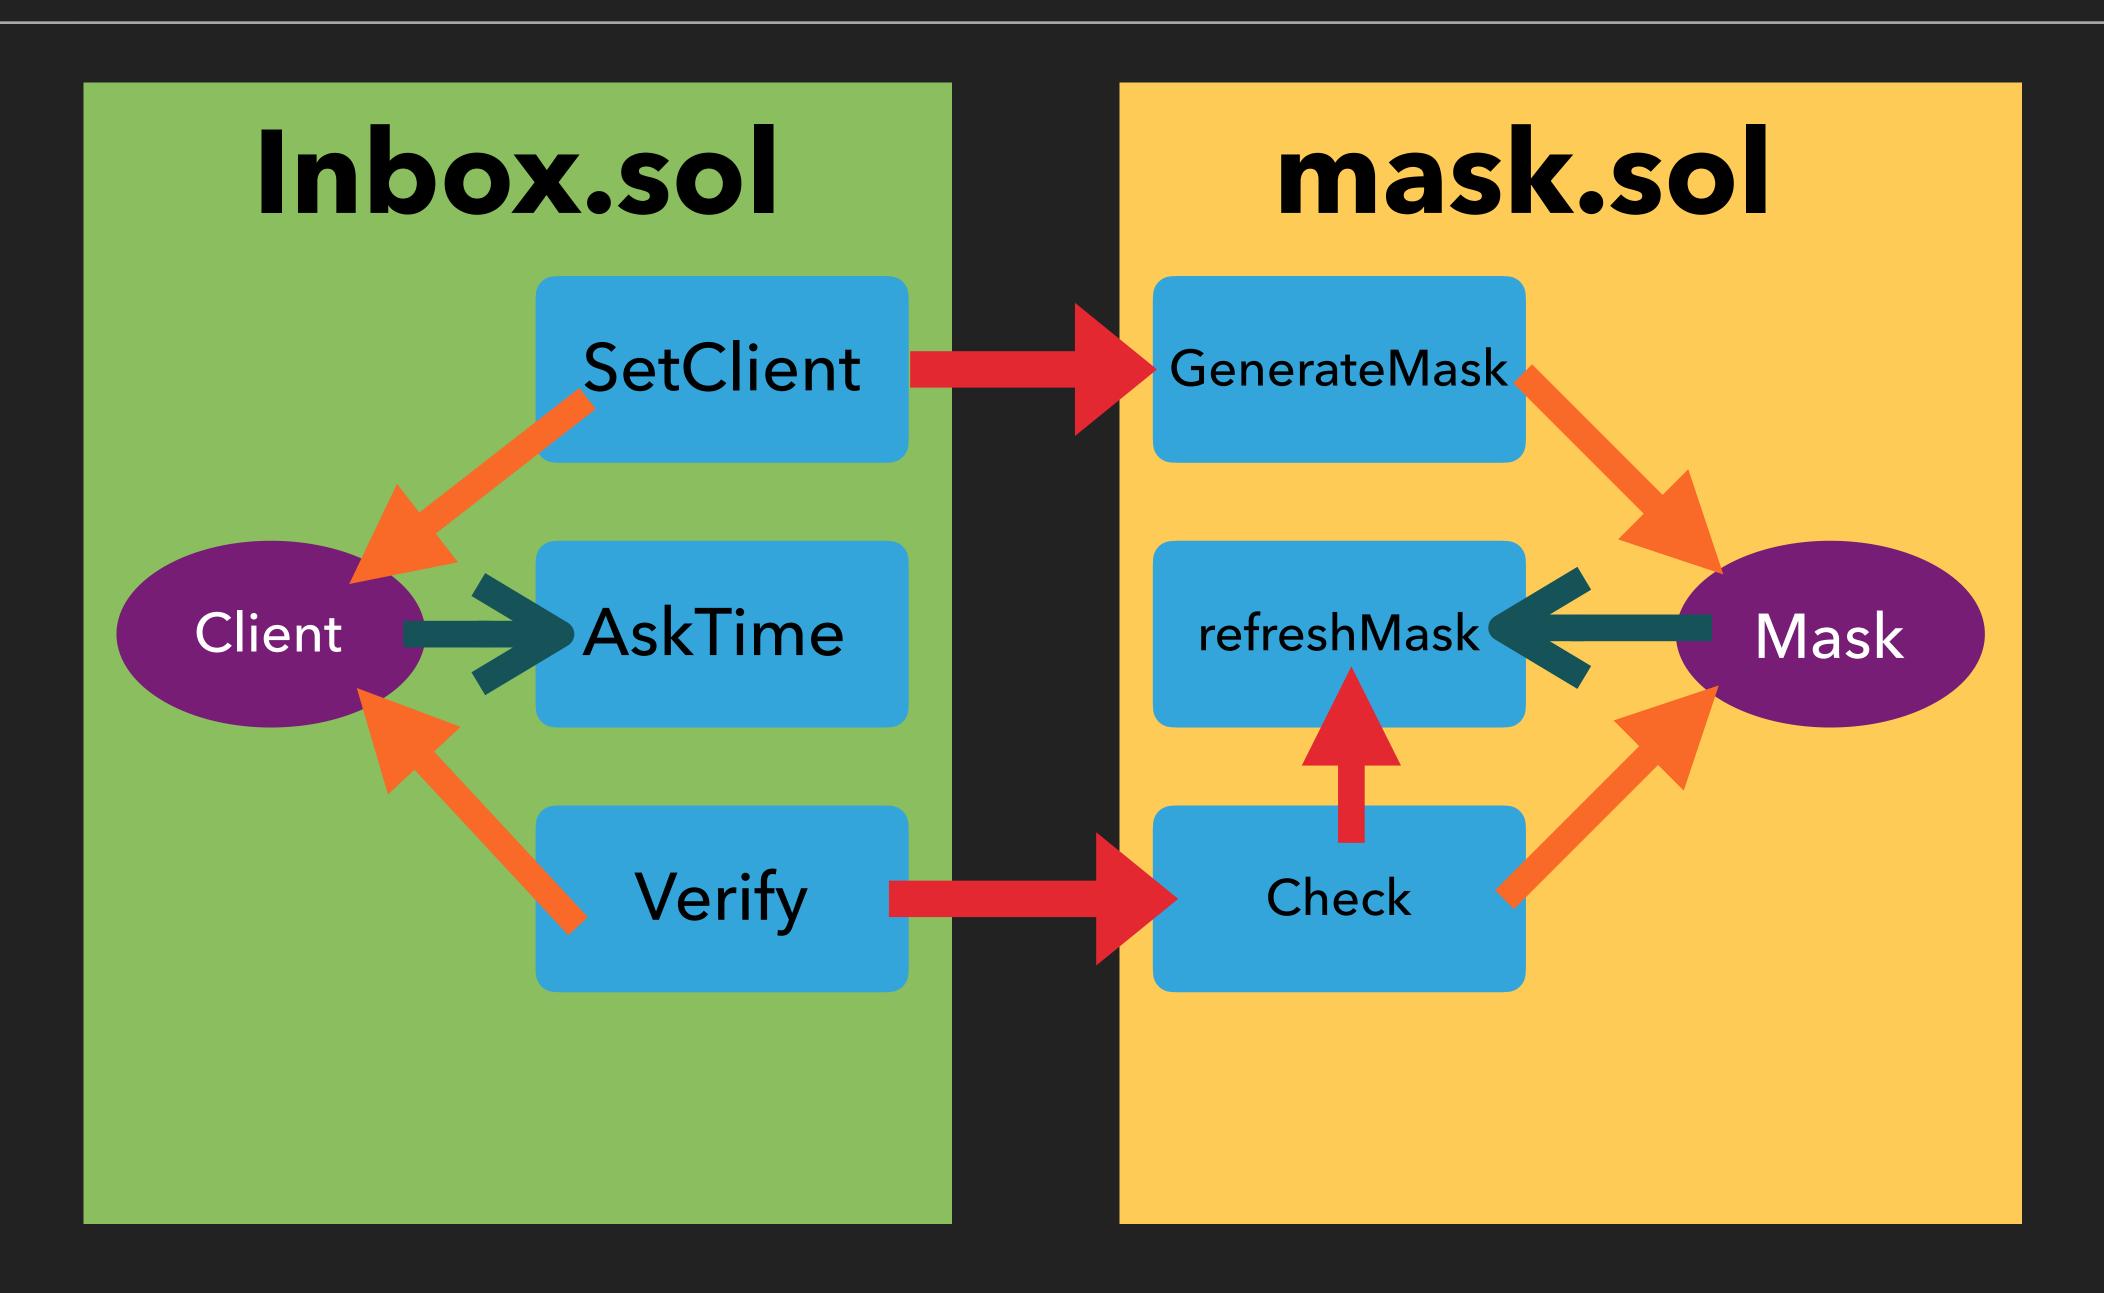

(二)程式架構

- Inbox.sol:
 - ▶ 設定client資料(SetClient)
 - ▶ 詢問mask更新次數(AskTime)
 - ▶ 驗證身份(Verify)

Mask.sol:

- ▶ 生成私鑰(GenerateMask)
- ▶ 更新mask(refreshMask)
 - -> hash(sha256)
- ▶ 協助確認 (Check)

(二)程式架構

程式Demo

- 1.部署合約
- 2.設定Inbox的合約地址(SetAddress)
- 3.設定client資料(SetClient)
- 4.AskTime(詢問更新Key次數)
- 5.計算密碼
- 6.驗證
